**Software
Installation
Guide**

3.1 Introduction

AHP-1070 is preloaded with Windows CE 6.0. After applying with power, the system will boot directly to Windows CE.

3.2 Permanent Storage

The system comes with an on board NAND Flash for permanent storage. It is mounted under “/NAND Flash” folder. The storage space is around 200MB. User requires to put all permanent data in “/NAND Flash” folder.

All other places in the file system are ram image. Any modification on the files of this image will be lost after any power fail.

3.3 Boot Up Execution File

The system will look for a boot script file under “\NAND Flash\autoexec.exe” during boot up process.

If this file exists, the system will launch this application at boot.

3.4 Hive Based Registry

The Windows CE 6.0 Image in AHP-1070 uses hive-based registry, which stores registry data in files. These files are stored in permanent storage under “\NAND Flash”.

3.5 Demo Applications

AHP-1070 CD-ROM includes sample applications to controls the GPIO and Watchdog.

GPIO:

To control GPIO pins on CN4, a sample application with source code guides user to develop custom applications using GPIO pins. A readme file is provided with the source code.

Watchdog:

To utilize watchdog timer function on AHP-1070, a sample application with source code guides user to develop custom applications using GPIO pins. A readme file is provided with the source code.

3.6 SDK installation

AHP-1070 CD-ROM includes SDK for user to build custom applications. This enables the support for Visual Studio 2005 and .NET Compact Framework 3.5. Users building their own applications on AHP-1070 require installing this SDK. Follow the installation guide in the “SDK” folder in CDROM.
